Dewberry Providing Geospatial Support to FEMA in Response to California Wildfires

Firm providing emergency support to assist in agency's response and recovery efforts

Fairfax, VA—January 29, 2018

Dewberry, a privately held professional services firm, is currently providing geospatial support, including damage assessments and imagery analysis, to the Federal Emergency Management Agency (FEMA) in response to the California wildfires that have impacted eight counties: Butte, Lake, Mendocino, Napa, Nevada, Orange, Sonoma, and Yuba.

The data the firm is developing is providing situational awareness to FEMA and assists the agency's response and recovery efforts, including identifying building and infrastructure damage and debris modeling. The data is also helping expedite Individual Assistance grants and rental assistance. FEMA has approved more than 4,000 Individual Assistance applications for those affected.

The work is performed under the firm's U.S. Department of Homeland Security Remote Sensing for Incidents contract. Dewberry is also providing geospatial support, including modeling, imagery analysis, and data interpretation, to FEMA in the aftermath of Hurricane Harvey in Texas and Louisiana, and Hurricane Maria in Puerto Rico and the U.S. Virgin Islands.

About Dewberry

Dewberry is a leading, market-facing firm with a proven history of providing professional services to a wide variety of public- and private-sector clients. Recognized for combining unsurpassed commitment to client service with deep subject matter expertise, Dewberry is dedicated to solving clients' most complex challenges and transforming their communities.
