

FOR IMMEDIATE RELEASE: May 2018

Juniper Systems celebrates 25 years of business

Logan, UT – Juniper Systems, Inc. is celebrating its 25th anniversary as a leading manufacturer of innovative, ultra-rugged solutions for mobile data collection. In these 25 years, Juniper Systems has grown from a small company focused on seed research to an internationally-recognized manufacturer serving a variety of markets.

“We have always put a focus on developing long-term relationships by understanding our customers and the work they are doing, providing quality products and solutions to meet those needs, and supporting and taking care of them after the sale,” said Juniper Systems President and CEO DeVon Labrum. “This approach to business has served us well over the years, and is still the foundation of everything we do. Celebrating this milestone is significant to Juniper Systems. While there are always ways we can and need to improve, it is a measure of the trust our partners and customers have in us.”

With construction of a **52,000 square-foot building addition** underway, Juniper Systems has prepared itself for growth by continually producing innovative, ultra-rugged handheld computers, GPS receivers, and data collection software. Among these are the **Mesa 2 Rugged Tablet** and **Geode Sub-meter GPS Receiver**.

“There's a lot of excitement as we look to the future, and there are continued opportunities for growth for our company. We have an attractive and growing product portfolio and expect that to continue. A continued focus on what our customers need, and the innovation of new products and solutions will be key to ongoing success. We look forward to the next 25 years,” said Labrum.

The company plans to celebrate this milestone on Friday, May 11, 2018. For local publications wishing to attend this event, please call 435-753-1881 for details.

About Juniper Systems:

Based out of Logan, UT, USA and Birmingham, UK, Juniper Systems designs and manufactures ultra-rugged handheld computers and provides field data collection solutions for use in extreme environments. Since 1993, Juniper Systems has provided innovative mobile technology to natural resources, utilities and public services, geospatial, agriculture, industrial, and military markets.
