

SimActive Software Saving Hours for DJI Drone Surveys

Montreal, Canada, May 15th, 2018 – SimActive Inc., a world-leading developer of photogrammetry software, is proud to announce an improved workflow for DJI users. Hours of processing time per project are now saved, with volume measurement, pre-construction planning, land development, and other applications streamlined.

Butler & Associates Inc., a professional surveying firm with over 35 years of experience, is one such user. In conjunction with their DJI Phantom 4 Pro drone imagery, Correlator3D™ is significantly reducing the field work and processing time per project for their topographical surveys.

“An area of over 20 acres was previously taking us a week to survey using traditional surveying equipment”, said Michael A. Tavener from Butler & Associates. “The same process from acquisition to results can now be fully completed in only 8 hours. The phenomenal technical support and friendly price for such a high-end mapping tool like Correlator3D™ has delivered incredible value to us and our clients.”

About Butler & Associates Inc.

Founded in 1983, Butler & Associates, Inc. provides surveying, mapping and hydrography services to professional clients along the Gulf Coast. Their highly trained technicians use modern, industry-leading equipment including GPS and robotic survey instruments to provide accurate, dependable readings for all surveys. About SimActive

SimActive is the developer of Correlator3D™ software, a patented end-to-end photogrammetry solution for the generation of high-quality geospatial data from satellite and aerial imagery, including UAVs. Correlator3D™ performs aerial triangulation (AT) and produces dense digital surface models (DSM), digital terrain models (DTM), point clouds, orthomosaics and vectorized 3D features. Powered by GPU technology and multi-core CPUs, Correlator3D™ ensures matchless processing speed to support rapid production of large datasets. SimActive has been selling Correlator3D™ to leading mapping firms and government organizations around the world, offering cutting-edge photogrammetry software backed by exceptional customer support.
