

SimActive Launches Free Data Processing Service

Montreal, Canada, March 20th, 2018 – SimActive Inc., a world-leading developer of photogrammetry software, is proud to announce a new free data processing service using Correlator3D™. New users can upload their first UAV, satellite or aerial image project to obtain DSM, DTM, point cloud and orthomosaic outputs. Along with optimal results, users also receive tailored feedback, recommendations and training from SimActive experts.

The service requires no obligation and is based on Correlator3D™ software, building on more than a decade of innovation on computer vision algorithms, a subfield of artificial intelligence. Quick turnaround is also possible due to the speed of the software and extensive use of GPU.

“Our new offer is unique to get the best possible results from the very first project onward”, said Dr Philippe Simard, President of SimActive. “Following this, users are trained with industry-leading technology, custom advice and necessary knowledge for successful mapping.”

To upload data, please visit www.simactive.com/start-mapping.html.

About SimActive

SimActive is the developer of Correlator3D™ software, a patented end-to-end photogrammetry solution for the generation of high-quality geospatial data from satellite and aerial imagery, including UAVs. Correlator3D™ performs aerial triangulation (AT) and produces dense digital surface models (DSM), digital terrain models (DTM), point clouds, orthomosaics and vectorized 3D features. Powered by GPU technology and multi-core CPUs, Correlator3D™ ensures matchless processing speed to support rapid production of large datasets. SimActive has been selling Correlator3D™ to leading mapping firms and government organizations around the world, offering cutting-edge photogrammetry software backed by exceptional customer support.
