Sky Power expands its Product Portfolio

Besides their own engine developments, Sky Power GmbH will expand its product portfolio with additional items and consumables. The aim is to offer the customer all items that are necessary for the reliable operation of a Sky Power engine by one provider.

"Our plan is the constant development of this product segment", stated Karl Schudt, CEO of Sky Power GmbH. 2-stroke engine oils of various manufacturers have been sold in single fillings since the founding of the company. At the end of 2018, Sky Power entered a further cooperation with the Czech propeller provider Mejzlik. Now in a further step, air filters and spark plugs of different sizes will be included in the product range. "Other products are in the planning stages and will be offered to our customers one by one", continued Schudt.

The benefit for the customer is priority. "All products match our engines and are tested by us so that the customer does not have to do any research if he wants to reorder a consumer product", explained Schudt. Sky Power therefore also offers the subscription service for consumables. "If the customer knows how high his consumption is we can supply the consumables at intervals that are defined by the customer. These delivery dates can be set in advance, so that no further orders must be initiated by the customer. One single order at the beginning of the subscription is sufficient", emphasized Schudt.

Sky Power will be attending the AUVSI XPONENTIAL 2019 – All Things Unmanned in Chicago, Booth # 1834, from April 29th through May 2nd.

Sky Power GmbH is a leading manufacturer of 2-stroke combustion- and Wankel engines for UAS (Unmanned Aerial Systems) and hybrid applications. Besides in-house development and manufacture, Sky Power produces all engines in Germany. Customer adaptations, new developments and the improved performance of the combustion engines are a further company objective.
