

- when it has to be right

May 30, 2018

To Whom It May Concern:

Leica Geosystems, part of Hexagon AB is a provider of geospatial aerial survey products and services to a broad range of customers around the globe. We, or predecessor companies, have been a prime contractor to the USDA National Agricultural Imagery Program (NAIP) since 2004 and support the HxGN Content Program business, which supplies precision aerial imagery products, using state-of-the art Leica Geosystems airborne sensor technology.

Since 2009, CompassData has provided field survey services to Leica Geosystems and predecessor companies, including the surveying of Ground Control Points (GCPs) across North America and Western Europe for the HxGN Content Program and the NAIP. Approximately 3,000 GCPs have been ordered to date across the United States in the USA, Canada, and Western Europe. CompassData has consistently supplied high quality, standardized products in a timely manner. Leica Geosystems has utilized direct order of GCPs with selected field locations and existing GCPs from the CompassData archive to meet the specifications of both the HxGN Content and NAIP activities.

CompassData is a dedicated partner assisting in the successful fulfillment of the quality product we deliver to our clients. We recommend CompassData as a geospatial service provider.

Sincerely,
